INVITING LIGHT
A family of task lights

Inviting Light is a family of task lights for the home, which invites the user to change the light depending on the need and mood. By allowing the user to easily move the light, a workplace can be created either at the kitchen table or in a reading corner.

By keeping the architecture simple and clean, the focus is drawn to the head of the luminaire. The head has one point of interaction, the circular knob, which is slid from one side to the other to control the luminosity. By rotating the knob, you either get warm, neutral or cool light, allowing the user to create the desired atmosphere.
