

ARRAY OF LIGHT  
Hands-on lights

These luminaires have movable light sources that you can slide along a rail to place them in different positions. This way we create a dynamic and poetic indoor light that can be controlled in a hands-on way. As opposed to common room lighting, that is static and controlled from a distance, this luminaire moves with us to where we need the light to be.

When a sphere is moved from its base it lights up. The control of the light is literally in your hands. Move the light in the room along the wall lamp, spread or collect the light on the floor lamp. Turn the light on and off in a tactile way with the table lamp. Change the light hands on - grab it by the balls.
