COOKING CHOPSTICKS

fx672046@gmail.com

Xue Feng

Every year there are a large number of trees chopped to produce chopsticks. The consumption of woods is non-recyclable, affecting the natural ecological balance and causing global warming. Changing the material of chopsticks to aluminum which can be reused is a good way to solve this problem. Since, cooking chopsticks are made by aluminum and it also has various functions. The bottom of this chopstick has a large flat surface which ensures a good grip of food, and it will not be stuck by vegetables. The top of this chopstick has a spoon which can help users to get spices and measure them easily.
